

# Xtrons Tyre Pressure Monitoring System

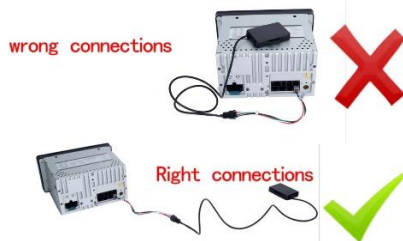

## TPMS05 installation

on Xtrons PB7839BP or on compatible devices

1. Install the sensors and the receiver

2. The receiver must be placed as far as possible from the Xtrons head unit.

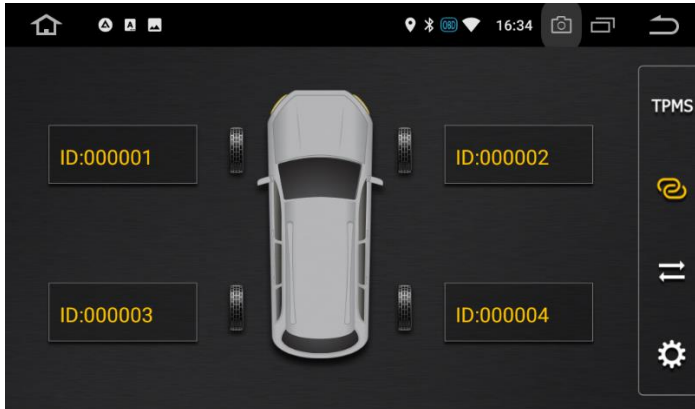

3. In the Factory Settings menu you should select the TPMS\_01 unit, then hit Apply and Exit to save it. The unit will reboot.

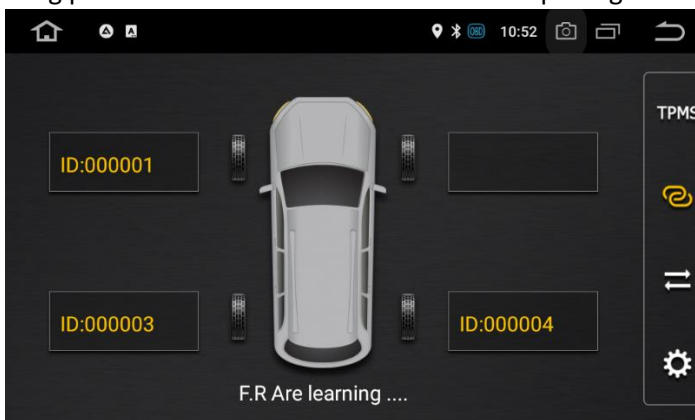

4. Start the TPMS App.

5. Press Pairing button

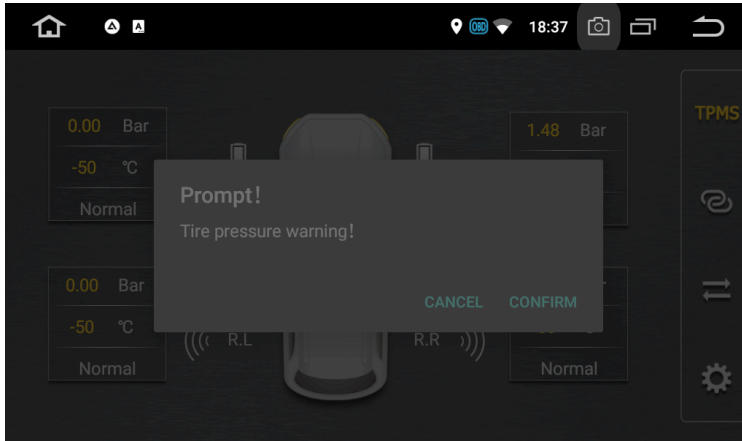

6. Long press on ID:000002 to enter the sensor pairing for the Front Right tire.

7. Deflate the tire during the pairing with a small screwdriver or with a special valve deflate tool.

8. The pairing will done, and you will see the following screen on Xtrons:

9. Now you can hit Confirm or Cancel and you are done with the first tire.

10. Now you can inflate the tire to the normal pressure

With the same procedure you can pair the other sensors too.
